

Design System & Brand Guidelines

Version 1.0 - Brand foundation for consultancy, product, project delivery, and AI training experiences.

Brand promise

Transform complex technology into reliable, human-centered digital solutions that help organizations move faster with confidence.

Prepared from the supplied Nexwavy Solutions logo materials

FOUNDATION

Contents

A practical operating system for how Nexwavy Solutions should look, sound, and behave across brand, web, products, decks, documents, and training materials.

01

Brand foundation

Purpose, mission, personality, and voice.

02

Logo system

Primary lockups, clear space, scale, placement, and misuse rules.

03

Color system

Core palette, gradients, accessibility, and usage ratios.

04

Typography

Recommended fonts, type scale, hierarchy, and copy rhythm.

06

Visual language

Iconography, patterns, imagery, and brand applications.

07

Information architecture

Site/app structure for services, content, and conversion.

08

Components

Headers, navigation, CTAs, cards, forms, tables, and states.

09

Content style

Messaging rules and terminology for consultancy, product, PM, and AI training.

Design principles: Outcome-first, clear before clever, modular by default, accessible at every touchpoint, and credible enough for enterprise buyers while staying approachable for learners and teams.

01 BRAND FOUNDATION

Brand foundation

● Consult

Make technology decisions simpler, evidence-led, and aligned with measurable business outcomes.

● Build

Design and ship useful digital products with product discovery, UX, engineering, and lifecycle thinking.

● Deliver

Manage IT projects with transparent governance, risk control, stakeholder alignment, and momentum.

● Train

Make AI practical for teams through hands-on learning, responsible usage, and adoption support.

Personality

- Competent, not complicated
- Future-ready, not speculative
- Precise, not cold
- Helpful, not generic
- Confident, not loud

Voice rules

Use

Outcome-led verbs: improve, launch, automate, align, reduce risk.

Avoid

Hype-first claims: revolutionary, magic, disrupt everything.

Use

Plain-language explanations before technical depth.

Avoid

Acronym-heavy copy without context or user benefit.

02 LOGO SYSTEM

Logo system

The logo system is built around the geometric N mark and the Nexwavy Solutions wordmark. Use the official lockups consistently to protect recognition.

Primary logo on light backgrounds

Use for websites, proposals, reports, slides, learning materials, and light merchandise.

Primary logo on dark backgrounds

Use on navy/black hero sections, covers, signage, and premium tech merchandise.

Full lockup

Default for external communications. Use where space supports the full name.

N mark

Use for favicon, app icon, social avatar, watermark, pattern, or small merchandise.

Wordmark alignment

Keep mark and wordmark together in the supplied proportion. Do not recreate spacing.

02 LOGO SYSTEM

Logo clear space and sizing

Clear space preserves brand presence and prevents visual noise. Use the mark as the spacing reference.

Clear space

Maintain at least 1x clear space around the full logo, where x is the width of one vertical stroke in the N mark. For premium touchpoints, increase to 1.5x.

Minimum sizes

Use case	Minimum	Notes
Full lockup - digital	160 px wide	Use 2x export for retina screens.
N mark - digital	32 px wide	24 px only for favicon usage.
Full lockup - print	35 mm wide	Use vector artwork for all print.
N mark - print	8 mm wide	Avoid small text below this size.
Merchandise	50 mm wide	Prefer embroidery-safe simplified mark when needed.

Master files: SVG / PDF / AI for production. Use PNG only for office documents and web previews. Do not trace or recreate the logo manually.

02 LOGO SYSTEM

Logo placement and variants

Use high contrast, consistent placement, and enough breathing room. The logo should never compete with dense content.

Top-left standard

Best for web apps, dashboards, proposals, and training materials.

Best for cover pages, launch moments, signage, and splash screens.

Small mark

Best for favicons, avatars, device stickers, badges, and pattern systems.

Logo contrast rules

- Use primary blue on white, fog, very light gray, navy, and black backgrounds.
- When placed over photography, use a solid light/dark panel or gradient overlay behind the logo.
- Never place the blue logo on mid-blue, noisy, or low-contrast backgrounds.
- Never stretch, recolor, outline, add shadows, rotate, or alter the supplied lockups.

Do not stretch

Preserve original proportions.

Do not recolor

Use approved blue, white, or monochrome variants only.

Do not add effects

No shadows, bevels, glows, outlines, or gradients on the logo.

Do not crowd

Keep the clear space free of text, photos, or borders.

Do not rotate

The mark must sit upright and aligned.

Do not use low contrast

Do not place blue on busy or similar blue backgrounds.

03 COLOR SYSTEM

Color palette

The palette is extracted from the supplied brand materials and expanded into a usable system for brand, web, product UI, and learning experiences. Confirm production values against original vector assets when available.

Nexwavy Blue

#3069B0

Primary

Logo, CTAs, links, key actions, data highlights.

Midnight Navy

#071626

Primary dark

Hero sections, covers, footers, dark UI, premium surfaces.

Signal Blue

#1E90FF

Accent

Highlights, hover states, charts, AI/training accents. Not for small body text on white.

Cloud

#F4F7FB

Surface

Page backgrounds, cards, subtle sections, diagrams.

Line Grey

#E5E7EB

Border

Slate

#697586

Secondary text

Ink

#111827

Text

AI Teal

#C9F4F2

Support

Semantic colors

Success

Completed, approved, healthy

Warning

At risk, pending action

Error

Blocked, failed, destructive

Info

Informational, neutral notice

03 COLOR SYSTEM

Color usage and accessibility

Color should support meaning, hierarchy, and trust. It should not be the only way information is communicated.

Recommended usage ratio

- 62% White/Cloud
- 22% Ink/Navy
- 12% Blue
- 4% Accent

Contrast guidance

- Blue on white: 5.6:1 - AA for normal text.
- White on blue: 5.6:1 - AA for buttons and labels.
- Signal Blue on white: 3.2:1 - use for icons, large text, or accents only.
- Use icons, labels, or patterns alongside semantic colors for accessibility.

Approved combinations

Blue text on white

White text on navy

White text on blue

Ink text on cloud

04 TYPOGRAPHY

Typography

Use a modern geometric headline style paired with a readable interface/body typeface. Typography should make technical information feel structured and approachable.

Primary headline type

Montserrat

Use Montserrat SemiBold/Bold or Poppins SemiBold for landing pages, decks, section titles, and high-impact messaging. Keep tracking normal; avoid all-caps headlines except short labels.

Primary body and UI type

Inter

Use Inter, Source Sans 3, or system sans for body copy, product UI, forms, tables, training materials, and data-heavy layouts. Use 1.45-1.6 line-height for reading comfort.

Font stack and accessibility

- Recommended CSS: font-family: Inter, Source Sans 3, Segoe UI, Roboto, Helvetica Neue, Arial, sans-serif;
- Use 16 px minimum body text for web and product UI. Use 14 px only for dense metadata or tables.
- Avoid thin weights below 400. Use 600-700 for headings and 500-600 for buttons and labels.
- Do not mix more than two font families in a single experience.

04 TYPOGRAPHY

Type scale and hierarchy

The type scale keeps websites, products, proposals, and training documents consistent. Use responsive adjustments on smaller screens.

Token	Desktop	Mobile	Weight	Usage
Display	64 / 72	44 / 52	700	Hero campaigns, major launch pages
H1	48 / 58	36 / 44	700	Page titles, product/service entry points
H2	40 / 48	30 / 38	700	Main sections
H3	32 / 40	24 / 32	600	Subsections, cards, modules
H4	24 / 32	20 / 28	600	Card titles, blocks
Body L	18 / 30	17 / 28	400	Intro copy, reading pages
Body	16 / 24	16 / 24	400	Default UI/body copy
Small	14 / 20	14 / 20	400	Metadata, helper text, captions
Label	12 / 16	12 / 16	600	Buttons, tags, table headings

Build AI-enabled products with confidence

Use a strong headline, clear value proposition, and concise supporting copy.

05 LAYOUT TOKENS

Layout, spacing, radius, and elevation

Use a tokenized layout system so brand and product experiences scale cleanly across marketing pages, dashboards, and training portals.

12-column responsive grid

Desktop: 12 columns, 72-96 px side margins. Tablet: 8 columns. Mobile: 4 columns. Keep content width

Spacing scale

	2xs	4px
	xs	8px
	sm	12px
	md	16px
	lg	24px
	xl	32px
	2xl	48px
	3xl	64px

Radius

Elevation

Use subtle shadows. Default cards should rely on borders; elevated overlays may use 0 12 32 rgba(7,22,38,.14).

Motion

150-220 ms transitions. Use ease-out. Motion should clarify state, not decorate content.

06 VISUAL LANGUAGE

Visual language

The visual language should feel engineered but human: geometric, ordered, bright, and purposeful. The N mark can inspire patterns, frames, and directional motifs.

Geometric N-pattern

Use as low-opacity background, section divider, training certificate texture, or product empty state. Keep it subtle and spacious.

Iconography

Consult

Build

Deliver

Train

Use outline icons with consistent 2 px stroke, rounded corners, and simple metaphors. Icons should clarify service categories and UI actions.

Shape

Use angled geometric cuts inspired by the N mark.

Photography

Prefer real teams, workshops, product screens, and modern devices.

Illustration

Use simple isometric or flat diagrams with blue as the anchor.

Data

Use clean charts with blue for primary series and semantic colors sparingly.

06 VISUAL LANGUAGE

Brand applications

The supplied mockups show a flexible system across documents, apparel, hardware, signage, and wearable merchandise. These applications should remain clean, confident, and restrained.

Business documents

Use generous whitespace and a single blue accent line.

Apparel

Hardware / gifts

Signage

Wearable merchandise

Application rule: Let the mark be the hero. Avoid excessive slogans, busy patterns, or multiple logo placements on one object unless the production format requires repetition.

07 INFORMATION ARCHITECTURE

Information architecture

The brand needs a clear structure for clients who are evaluating services, exploring AI training, reviewing proof, or trying to contact the team.

Recommended website sitemap

07 INFORMATION ARCHITECTURE

Navigation patterns

The header and footer should reduce decision fatigue and move users toward the next useful action.

Services

Case Studies

AI Training

Insights

About

Contact us

Desktop header: logo, 5-6 primary navigation items, one high-intent CTA. Keep sticky behavior subtle.

Consultancy, product development, IT project management, and AI training for teams building the next wave of digital capability.

Privacy

Naming

Use plain nouns: Services, Case Studies, AI Training. Avoid vague labels like Solutions unless supported by a service landing page.

Conversion

Every service page needs one primary CTA, one proof point, and one next-step option.

Search

For content-heavy sites, include global search and filterable insights/case studies.

08 COMPONENTS

Component foundations

Components should be modular, accessible, and easy to implement. Use the same token system across marketing, product, portals, and internal tools.

Core component tokens

Token	Default	Notes
Surface	White / Cloud	Cards and page sections
Border	Line Grey	1 px default
Radius	10-16 px	UI controls: 8-10; brand cards: 14-16
Focus	2 px Blue ring	Always visible for keyboard users
Shadow	Subtle	Use sparingly on overlays
Spacing	8 px grid	Component internals use 8/12/16/24
State	Hover/Active/Disabled	Never rely on color alone

Component inventory

Global	Header, footer, breadcrumbs, mega menu, search
Action	Buttons, links, icon buttons, button groups
Input	Text fields, select, checkbox, radio, toggles, upload
Display	Cards, badges, avatars, stats, empty states
Feedback	Alerts, toasts, progress, loading, validation
Data	Tables, filters, charts, pagination
Overlay	Modal, drawer, popover, tooltip
Content	Hero, service section, CTA band, FAQ accordion

Accessibility contract: Every interactive component needs keyboard focus, semantic labels, sufficient contrast, visible states, disabled-state rationale, and error/help messaging when required.

08 COMPONENTS

Buttons and CTAs

Calls to action should be direct, active, and context-specific. Button hierarchy should make the next best action obvious.

Button hierarchy

Primary

Book consultation

Min height 40 px, 16 px side padding

Secondary

View services

Min height 40 px, 16 px side padding

Tertiary

Read case study

Min height 40 px, 16 px side padding

Destructive

Delete

Min height 40 px, 16 px side padding

Good CTA labels

- Book a consultation
- Explore AI training
- View project approach
- Download capability deck

Avoid vague labels

- Submit
- Click here
- Learn more
- Get started without context

State rules

- Default, hover, active, focus, loading, disabled
- Loading state keeps width stable
- Disabled state includes reason when possible

08 COMPONENTS

Forms and inputs

Forms should feel fast, trustworthy, and low-friction. Use clear labels, helpful examples, and progressive disclosure where needed.

Contact form pattern

Full name

Ada Lovelace

Email

ada@company.com

Service interest

Product development

Project summary

Tell us about your goals, timeline, and constraints.

Send enquiry

Response within 1-2 business days

Form design rules

- Place labels above fields, not only as placeholders.
- Group related fields and use section headings for long forms.
- Use inline validation after the user leaves a field or submits.
- Make error messages specific and human.
- Use progressive disclosure for complex project scoping.
- Show privacy assurance near personal data collection.
- For training registration, clarify prerequisites, schedule, and expected outcomes.

Default

Placeholder

Error

Invalid email

Use clear, human error copy.

08 COMPONENTS

Cards, sections, and content blocks

Cards organize services, case studies, learning modules, and proof points. Use clean surfaces, small labels, and outcome-led titles.

SERVICE CARD

AI Strategy & Enablement

Turn AI interest into practical workflows, governance, and team capability.

[Explore ->](#)

CASE STUDY CARD

Reduced manual reporting by 42%

A data workflow redesign helped leadership get weekly insights without spreadsheet bottlenecks.

[Explore ->](#)

TRAINING MODULE

Prompt Engineering Basics

Hands-on learning for teams who want safer, better AI-assisted work.

[Explore ->](#)

Section anatomy

Label

Short context tag above headline

Headline

Outcome-led, specific, 6-12 words

Body

Explain value and audience in 1-3 lines

Proof

Metric, quote, case, logo, or credential

CTA

One primary next step

08 COMPONENTS

Tables, dashboards, and project views

Nexwavy often handles complex work. Data-heavy interfaces should make status, ownership, risk, and next steps immediately clear.

Project delivery dashboard pattern

Workstream	Owner	Status	Next step
Discovery	Product Lead	On track	Validate priority journeys
Engineering	Tech Lead	At risk	Resolve API dependency
Training	AI Coach	On track	Confirm pilot cohort
Governance	PM	Blocked	Approve steering cadence

Data UI rules: Freeze key identifiers, right-align numbers, avoid more than 5 status colors, pair colors with text labels, and make ownership/next step visible in the same row.

08 COMPONENTS

Service and training experience patterns

Use modular patterns that support both advisory sales and learning delivery. Every pattern should explain who it is for, what happens, and what outcome is expected.

Service landing page

- Hero value proposition
- Pain points and outcomes
- Approach / methodology
- Proof / case study
- Packages or engagement models
- FAQ and consultation CTA

Proof point required: include metric, case example, testimonial, or delivery credential.

AI training page

- Audience and prerequisites
- Learning outcomes
- Curriculum modules
- Format and duration
- Instructor credentials
- Registration CTA

Training promise: practical AI skills teams can use immediately, responsibly, and safely.

Product development page

- Discovery process
- Prototype examples
- Delivery model
- Technology fit
- Roadmap and support
- Product consultation CTA

Proof point required: include metric, case example, testimonial, or delivery credential.

09 CONTENT STYLE

Content style and terminology

The language system should help clients understand complex technology decisions quickly and feel confident about the next step.

Naming consistency

Use "Nexwavy Solutions" as the primary company name in all external materials, matching the supplied logo. Avoid inconsistent variants such as "Nexwaxy Solution" or "Nexwavy Solution" in finished assets.

Message matrix

Audience	Need	Nexwavy message	CTA
Executive buyer	Confidence and ROI	Align technology investment with measurable business outcomes.	Book a consultation
Product team	Discovery and delivery support	Build useful products with evidence, design, and iterative delivery.	Explore product development
Project sponsor	Control and visibility	Keep IT delivery on track with clear governance and proactive risk management.	Review project approach
Learning lead	Practical AI capability	Equip teams with hands-on AI skills, safe usage habits, and workflow adoption.	Explore AI training

- Lead with outcomes before technology names.
- Use specific verbs and measurable claims when evidence exists.
- Write for smart non-specialists first; add technical depth second.
- Use short paragraphs, scannable headings, and practical examples.
- For AI, emphasize responsible enablement and business value.

10 GOVERNANCE

Governance and implementation checklist

A design system only works when teams can find, use, and maintain it. Treat this document as the starting point for a living brand system.

Before publishing brand assets

- ☐ Correct company name used
- ☐ Approved logo file used
- ☐ Clear space maintained
- ☐ Color values match tokens
- ☐ Typography matches hierarchy
- ☐ Accessibility contrast checked
- ☐ No logo distortion or unauthorized effects

Before shipping UI

- ☐ Components use tokens
- ☐ Keyboard focus visible
- ☐ Form errors are specific
- ☐ Responsive layout checked
- ☐ Text is readable at mobile sizes
- ☐ States documented
- ☐ Analytics or success metric defined

System maintenance

- ☐ Keep master files in a shared library
- ☐ Version component changes
- ☐ Review quarterly with leadership
- ☐ Collect examples of misuse
- ☐ Add new patterns after repetition
- ☐ Document AI/training-specific needs
- ☐ Update accessibility notes annually

File naming: nexwavy-[asset-type]-[variant]-[color]-[size]-v[version]. Example: nexwavy-logo-primary-blue-1600px-v1.png

DESIGN SYSTEM SUMMARY

Quick reference

A compact view of the decisions that should guide all future Nexwavy Solutions brand and product design work.

NAME

Nexwavy Solutions

Use consistently across brand assets.

PRIMARY COLOR

#3069B0

Blue anchor for identity, CTAs, links.

DARK COLOR

#071626

Hero sections, covers, footers.

HEADLINE FONT

Montserrat / Poppins

Bold, geometric, modern.

BODY FONT

Inter / Source Sans 3

Readable for UI, web, and training.

GRID

12 / 8 / 4 columns

Desktop, tablet, mobile.

RADIUS

10-16 px

Modern, friendly, product-ready.

VOICE

Clear, expert, practical

Outcome-led and plain-spoken.

Future state of the brand: a disciplined, modern technology partner that turns ideas, projects, products, and AI capability into practical outcomes.

Use this document as the reference point for brand design, website design, product UI, proposals, training assets, and vendor execution.
